

DAAS

Desktop as a Service

RapidScale's DaaS offering allows companies of all sizes to move their desktops into the cloud – eliminating PC maintenance, support, and life cycle management.

Virtual desktop offering assures your business will show ROI on your PC's along with the many other benefits that come with an intelligent PC platform like RapidScale's Desktop as a Service.

PC replacement savings from repurposing old computers as thin clients and extending the life-cycle replacement time makes business sense.

To help your workforce be more mobile and efficient, without sacrificing security or control

- * Shared
- * Dedicated

→ Greater Flexibility

Easily meet the needs of geographically dispersed users through rapid deployment of new desktops, applications and system upgrades without touching end user devices.

→ Stronger Security

Manage the security, regulatory compliance, business continuity, disaster recovery, and information governance from a central location as opposed to hundreds or even thousands of end user devices.

→ Greener Computing

With processing transferred to the data center, you can reduce power use through efficient data center design and extend the life of existing computers.
